

9012 - 2 Disk 5.5" Diameter Clutch and Flywheel Assembly with Kevlar Facings (Pictured)

The 9012 Super Lightweight Clutch and Flywheel Package as light as 9.5 Lbs in the 5.5" size. Don't be misled by competitors ads that list clutch weight alone (not including flywheel). 10000 RPM's clutches have better driveability and are easier on driveline parts than other mini clutches. Typical Applications include 2000/2300 Ford, 2.2L Dodge, Toyota 2TC, 3TC, Nissan, Subaru, and the highly popular Mazda Miata; Many others available from stock or custom. 6.5" and 7.5" diameter 9012's are available for V8 engines including crate motors. Internal or external balance with counterweight machined into flywheel.

Call us with your racing application.

Note that 5.5" clutches use 6.2" disks to be legal at more tracks around the country. 6.5 & 7.5" clutches use 7.25" disks.

**Titanium pressure plate upgrade available by special order only, call for details.**
